

Still others have sadly lost their teeth to the dangerous effects of drug use.

We all know that drug use is pervasive in our country, and its adverse effects on teeth are shocking, to say the least. Our intention is always to return confidence and health back to these young ones who are on the road to recovery and their best new lives free from drugs.

Once your loved ones have made the decision to lead happy and healthy new lives, it will be time to remove the decay and to replace the broken, missing teeth so that they are socially accepted once again. We understand that you want that for them—first and foremost. When drug use comes to a halt, the systems inside the body repair and heal internally, but the permanent destruction inside the mouth remains and reminds us of past choices. The dental damage will not repair itself--only an expert like Dr. Anglis can remove all of it and transform your loved one into someone who is proud to smile again!

**We believe that your loved ones deserve a fresh start and no judgment from others,
and there is nothing more rehabilitative than a new smile!**

If someone you love has been dentally affected by the use of drugs, please know that we will keep your situation private and confidential, and will assist your loved one in his or her return to health smoothly, quickly, and easily. We can arrange private appointments when no one else is in our office locations, if needed.

Whatever the reason for the tooth loss, we are here to help!

We do not judge and will provide a safe, confidential oasis here to create a new smile for your dear one. Please call us at **1.877.526.4547** and let us know how we can help you and your family—it would be our privilege.
